

## ieWay

My Home Move ieWay iOS app  
(mobile/tablet)

October 2018  
[AppStore](#)

My Home Move was established in 2001 and has since grown to become the UK's leading provider of mover conveyancing services.

### The Challenge

My Home Move approached us with an interesting challenge - implement the functionality of their online platform in form of an iOS application that was easy to use and would even enlarge the possibilities of their award winning portal.

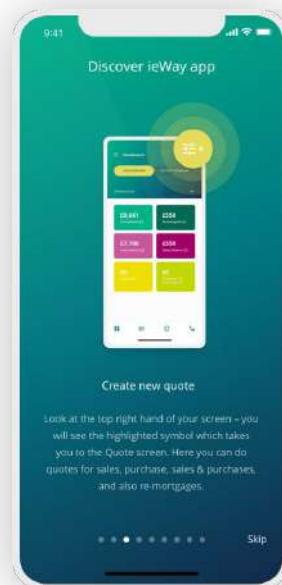

My Home Move partnered with us to build the mobile version of their Introduce eWay online platform that was used by their conveyancers in UK.

### The Solution

We have designed and documented user journeys and developed the iOS version working closely with My Home Move's API developers.

The ieWay app is a relatively large and difficult project. We have integrated various complex functionality, such as complex notifications flow, document processing and scanning, allowing scanning of documents directly from the app and uploading the scans to the conveyancer.

- Approximately 6 months from idea to fully featured universal application
- Case management
- Quote generation and management
- Conveyancer information
- Touch ID and Face ID user authentication
- Fully featured document scanning
- Full automated test suite for critical functionality
- Great UI/UX for both phone and tablet viewpoints

### Business Value

ieWay has just been released onto AppStore and we've already planned the Android version of the app but the great features of the app promise to be stellar on the market. The app has already gained momentum and app

installs is increasing quickly, allowing My Home Move users to access and manage their cases easily on the way. This has also resulted in an increase of business for My Home Move.
